

## WorkWave Analytics

Bring Your Own BI Tool

### What is WorkWave Analytics?

WorkWave Analytics' Bring Your Own BI Tool allows you user-friendly access to your data and the flexibility to use the reporting tool of your choice. The flattened dataset is updated nightly via a cloud data warehouse. You can then use whichever BI/Visualization tool you'd like such as PowerBI, Tableau or Excel to build customizable reports or dashboards.

### The tool may be right for you if you...

- ✔ Require more advanced reporting or analytics not currently offered inside the core Service Assistant program.
- ✔ Want to utilize SA data, along with other business systems data, in reporting.
- ✔ Want your Service Assistant data in a warehouse or "data lake."

### Key Features

Access to RealGreen data in customizable reports or dashboards; easily manage and create to your preferences.

Flattened data, updated nightly. This makes the data much easier to work with, as opposed to the raw data retrieved via API or report exports.

If your organization owns multiple companies on RealGreen's SA5, all of that data can be published to the same instance, giving you access to everything in one place.

### How Do You Get Started?

Contact your account manager or fill out the form at [realgreen.com](https://realgreen.com).
