

## API Access and WorkWave Analytics Comparison

RealGreen offers comprehensive market-leading functionality designed to be configurable to meet the needs of any green industry business. Access your RealGreen data for custom integrations and modifications using secure and flexible, yet simple, **application programming interfaces (APIs)**. Plus, **WorkWave Analytics' Bring Your Own BI Tool** allows you user-friendly access to your data and the flexibility to use the reporting tool of your choice.

**So what's the difference?**

AVAILABLE FEATURES	API	WWA
Integrates with other applications	✓	✓
Can create a data dashboard	✓	✓
Returns listing of records*	✓	✓
Requires a third party tool (Power BI, Google Sheets, etc.)	✓	✓
Used for current day activities updates for Sales, Production Deposits	✓	
Has prebuilt aggregated reporting end points	✓	
Can update Service Assistant data	✓	
Can be updated hourly	✓	
Has webhooks for site integration	✓	
Uses analytical or trend reporting		✓
Can pull large detailed lists of records		✓
Updated automatically (nightly)		✓
Normalized, flattened data		✓

**API access** should be used for integrations to update or consume data from the Service Assistant database, but should not be used for row-level reporting or analytics reporting.

**WorkWave Analytics** should be utilized for any row-level, analytical or trend reporting. Data is flattened and includes data dictionary. It includes the most comprehensive set of data available.
